

TECHNICAL SUPPORT FOR THE DEVELOPMENT OF A NET-ZERO TRANSFORMATION PATHWAY THROUGH A RESOURCE AND ENERGY EFFICIENCY CHECK FOR THE COISHCO PLANT, AUSTRAL GROUP S.A.A PERÚ

- Main objective: Support in the development of net-zero transformation pathway based on resource and energy efficiency optimization
- Focus: Reduction of fossil fuel energy sources, specially in steam boiler system and thermal energy supply, and implementation of renewable energies
- Technical site visit: October / November 2023
- Budget: 30,000.00 EUR (net)

Work Plan of the Consultancy Team			1				2			
			1	2	3	4	5	6	7	8
Task 1	Preparation of the REC	- Acquisition and review of relevant existing data and studies - Evaluation of energy efficiency measures previously identified by clients - Guidance in the identification and closing of information gaps								
Task 2 & 3	Material and Energy Flow Analysis and technical site visit to the Coishco Plant	- Status quo analysis (technical site visit) in terms of resource and energy consumption - Resource, energy and GHG emissions baseline - Identification of significant consumers - Recommendations for optimization measures, including technical and economic pre-feasibility analysis								
Task 4	Net-zero transformation pathway based on identified optimization measures	Decarbonization plan based on the identified optimization measures								
Task 5	Reporting	Completion of standardized report
